

I inserted the product using python shell as requested while the category using admin as also requested :

```
>>> product4 = Product.objects.create(name = "headphone", description = "black headphone", price = 200, stock = 10, sku = "hd1", category = Category.objects.get(name="audio"))
>>>

lab 1 django > gadgetgalaxy > product > models.py 2:11 (36 chars, 1 line break) LF UTF-8 4 spaces Python 3.12 (lab 1 django)

Terminal Local x + v
category.models.Category.DoesNotExist: Category matching query does not exist.
>>> product3 = Product.objects.create(name = "shirt", description = "black shirt", price = 2000, stock = 10, sku = "sh1", category = Category.objects.get(name="wearable"))
>>> product4 = Product.objects.create(name = "headphone", description = "black headphone", price = 200, stock = 10, sku = "sh1", category = Category.objects.get(name="audio"))
File "<console>", line 1, in <module>
NameError: name 'Product' is not defined. Did you mean: 'Product'?
>>> product1 = Product.objects.create(name = "hp", description = "black hp", price = 20000, stock = 20, sku = "lp1", category = Category.objects.get(name="laptop"))
>>> product2 = Product.objects.create(name = "iphone", description = "black iphone", price = 12000, stock = 10, sku = "mb1", category = Category.objects.get(name="mobile"))
>>> product3 = Product.objects.create(name = "shirt", description = "black shirt", price = 2000, stock = 10, sku = "sh1", category = Category.objects.get(name="wearable"))
```

NOTE : i only add the product to the admin panel to insert the imgs and check how they looked every other thing was done using the shell and the code as requested.
